TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS
Backend: Node.js, Express.js, Flask
Databases & ORM: MongoDB, PostgreSQL, Prisma
AI & Integrations: LLM-powered Features, Prompt Engineering
Tools & Platforms: Git, GitHub, Azure DevOps

WORK EXPERIENCE

- Craftgenn Technology (Software Engineer)** December 2025 – Present
- Integrated Google analytics 4 with custom A/B testing logic, implementing both frontend (Next.js) and backend (Flask) flows to enable experiment tracking across two website versions.
 - Delivered pixel-perfect, high-performance UI aligned with design specs, achieving 90+ SEO and performance scores through optimized rendering and resource handling.
- Axial Technologies (Full Stack Developer Intern)** June 2025 – September 2025
- Architected an e-commerce platform handling 500+ product catalog entries with multi-criteria sorting and optimized data queries.
 - Conducted performance testing, reducing API response times by 35% and ensuring smooth concurrent user sessions.
 - Designed and delivered intuitive UI layouts, boosting average session duration by 18% through clear product navigation.

EDUCATION

- APJ Abdul Kalam Technological University** 2022 – 2026
Bachelor of Technology in Computer Science Engineering CGPA: 7.9
- *Relevant Coursework:* Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks

KEY PROJECTS

- Local Insights - Travel Guide Platform** | GitHub | Live Link
- The system uses CDN edge caching together with server-side in-memory caching to lower database queries for popular guides, which resulted in response time reductions from 400ms to 45ms.
 - Implemented 500ms search debouncing and cursor-based pagination, which minimizes unnecessary API calls and database load.
 - *Technologies:* Next.js, Prisma, Nvidia(LLM), Recharts
- AOT Healthcare System** | GitHub | Live Link
- Benchmarked Express.js REST API performance with 100 simultaneous users through Autocannon which delivered about 103 successful requests per second without any failed requests
 - PWA implementation with Workbox integration which enables client-side asset caching to minimize server requests for static resources. The system decreases client requests for static resources by about 53% during their second visit.
 - *Technologies:* MERN Stack, Razorpay, Cloudinary

AWARDS

Best Avishkar Web Designer Winner, Avishkar'25 — First place at Musaliar College technical fest.

PUBLICATIONS & PRESENTATIONS

“Healthcare Scheduling System” — Published in the National Conference on Emerging Trends in Engineering and Science (NCETES'25) in association with ISTE. ISBN 978-93-342-4620-9.
